% SELF PERFORMED: ±90%

PROJECT

This project involved the construction of a diesel locomotive service facility for the Seaboard Systems Railroad. Additionally, other facilities included a sand silo structure and a gravity separator. A considerable amount of earth and rock excavation was involved, along with cast-in-place concrete. Also included in this project were foundations for the tank farm and site light pole bases. This was a fast track project with numerous contractors on site. Coordination and scheduling were highly critical to maintain control of the project.

Subject: Corbin Railyard Expansion
Subcontract 9362-sc-013

Dear Don:

The 3-D Enterprise work at our Corbin Railyard Project has been completed and accepted. Your final payment and retainage has been released.

Thank you for your cooperation and professional attitude throughout the project. Your commitment to our schedule and your attention to detail are commendable.

Please feel free to offer my name as a reference for future work and I look forward to a continued business relationship.

Sincerely,

Rex D. Huffman
Project Manager
